Du Pont Physician's Notes:

Name of Patient: Stan Stevens, his wife and children
Address: Billings, Montana
Phone No.: 406-656-2692

History of Exposure: See reverse side for Mayflower Moving Co. story. The exposure of the man and woman is a vague vapor exposure and her symptomatology is unclear. Dr. Shaw found nothing on physical examination or blood testing, including the liver enzymes.

The family allegedly was ordered to evacuate after the explosion at the drug "factory" next door and turned up with the dye on their skin when they moved back to their home 3/21.

Dr. Shaw knew of the explosion but thought it was heating gas.

Treatment Given: None.
Condition of Patient: See above
Physician: Dr. William Shaw Hospital:
Phone No.: c/o Dr. Shaw, 406-256-4710 Phone No.:

Information Given About Product: Oil-Bronze Liquid should be kept off the skin because of the two minor constituents; C I. Solvent Yellow 14 is a skin sensitizer, and Orange 2 is an animal bladder carcinogen if the material is implanted. Xylene is noticeable by odor but not harmful except in confined quarters and for long periods. Liver effects are highly unlikely.

Source of Information: MSDS #1638PC

Recommendations: (1) Try cold cream or other "waterless" skin cleanser. (2) Use detergent and Clorox\ carefully to clean appliances. (3) Report back to me if more of the story comes to light. (4) Daum will request that the leaking drum, in an overpack since 12/2/88, be returned.

Follow-Up: I gave Dr. Shaw the 800 number.

Notifications:

Departmental Liaison: R. V. Daum, C & P, B-16224
Haskell Coordinator: HJT
Department 8(c) Coordinator: K. D. Dastur, C & P, B-12308
