Cleveland Casting Plant

November 6, 1972

Mr. Norman S. Green
Safety Engineer
Engine & Foundry Division

Subject: Airborne Asbestos Fibers

This is to advise that after a thorough review of our plant, we can find no activity or jobs that use asbestos, with one exception. Powdered asbestos is purchased for use by outside contractors for repairing the insulation around the windbox of cupolas.

This material is purchased through our Engineering Department for this specific application. It is repaired at infrequent intervals, approximately once a year.
