TO J.S. Buchanan- MTL CC [redacted] - H.F. Dixon- MTL

OBJECTIVES: Discuss current environmental milieu and ramifications anticipated in Canada. Outline Monsanto's research and developments program for Non PCB contingency Candidates for capacitors and transformers Determine the Ministry posture on PCB's and how soon legislation may be enacted.

PERSONS CONTACTED: BOB PHOENIX- Head, Oil & Chemical Pollution Control

DARREL HOGG- Field Specialist

POINTS DISCUSSED: Present environmental situation in the United States and Monsanto's development work on replacement capacitor and transformer fluids. In the discussion of capacitor fluids, it was pointed out the bio degradable characteristics of Aroclor 1016 vs its predecessor. The 1016 is more bio-degradable and Ministry officials were wondering if the improvment was not sufficient. They were concerned about the stability of the previous Aroclor and present methods used to measure levels in water and in the sail. We shall provide the Ministry with Dr Jim Meure's test methods, ASTM D3304 and the soil retention and leach rates.

The provincial Ministry is not planning legislation and have yet to develope guidline. They will wait for the Federal Contaminants Act, Bill C25 to set the rules.
