ZONOLITE* MONO-KOTE*

Nobody, but nobody, has furnished more material for direct-to-steel fireproofing than Zonolite.

And nothing but Zonolite Mono-Kote offers as many advantages for this application. It bonds firmly to steel or other surfaces. It sets hard, and won't "dust-off" to clutter up mechanical equipment. It has been tested in more fire-resistive constructions than anything else.

Zonolite Mono-Kote has built-in density control. It's the same density material on the job as was used in the fire test. You get the fire protection you specify.

For structural fireproofing of floors, columns, beams or trusses, specify Zonolite Mono-Kote.
