ASBESTOS-FREE RINGS  
GREAT LAKES STEEL

On March 27, 1974 thirty (30) sets of asbestos-free 491 and 495 ring and extension combinations were sent to Great Lakes Steel. No one in the Central Region was notified of this shipment or of the trial. Dan Cregan, quite by accident, discovered that these had been shipped on April 2, 1974. He immediately went to Great Lakes Steel to try to determine what if anything had been done with this test material. After thorough checking of all inventories present, and not being able to find any of this material, it is assumed that it has been used without any observations at all by Fosco People. It is imperative that we repeat this trial and please notify myself or Dan Cregan when this material is being shipped so that we can properly evaluate it.
