installation, removal and replacement?

A I would have to --

Q Take your time.

A They have several location notes stated as note.

Q Do they have anywhere in there any warnings to avoid breathing the dust when changing the brakes?

A I have not seen one yet.

Q Would that be because, as far as you are aware, Ford didn't put any cautionary labels anywhere until approximately 1980?

A That very well could be, yes. I certainly remember when I was working in the 1950s there were no warnings of any sort as far as breathing the dust.

Q Because you were a mechanic sometime when you were financing your college; is that correct?

A That is correct.

Q Even back then, when you worked on vehicles, you also ground brakes and used an air hose; is that correct?

A I used an air hose routinely, yes.
