INTER-OFFICE MEMORANDUM

Date: April 21, 1992

Subject: [illegible]

From: [illegible]

[illegible]

Was disappointed at your comment that you were not as confident as you had been previously that CAFCO when properly sealed will not dust or flake. Siggy indicated that those boilers were in operation while CAFCO was being applied. The material which was returned appeared to be CAFCO. In all probability they never cleaned the boilers out completely and additional material was found with later cleaning. Are you implying in your third paragraph that now they have to shut down every 3 or 4 hours to clean the tips?

Once CAFCO has been applied and set up we do not recommend re-wetting (?) to densify (?) the product or fully activate the binder. These binders have been wet and spent with the first application. The only thing to do for this condition is to apply a heavy coat of sealer.

Was disappointed at your comme
