COMMERCIAL DEVELOPMENT COMMITTEE MEETING

JUNE 26, 1973

1. An investigation of Wollastonite irritation complaints was made. The problem is recognized and is in the hands of R. Porter.

2. England sent a report on high temperature resins used by the competitors. They report that the resin is just PF resin. Our suppliers do have some high temperature resins, but they are very expensive.

3. It was agreed that we do have a passable non-asbestos profax board. We need to now focus our efforts on a non-asbestos Proflex ring and one-piece top.

4. Schedule for the coming week:

6/27	Mark III Proflex Boards #572
7/2 or 3	Cleve. 1-PC #454 and 390
7/2	Mark IV Ring #699
7/6	Chic Seal-On ring #390 or 450
