Jay, I somewhat confused the message related to you on July 26 regarding contact at subject baking companies relative to changing from FR Fluid to Therminol 66.

Let me try to straighten this out. At Bond Baking Co. (with headquarters in Hartford, Conn.) the contact is Mr. Jack Baker at Area Code 203-522-4251. Bond Baking Co. have five Remo-Therm fryers. Two fryers are located in Brooklyn, New York at 495 Flatbush Avenue where the contact is Ed Steinman, Chief Engineer at Area Code 212-462-7900. Three fryers are located at Bond's Philadelphia plant where the contact is Mr. Robert Vitavich at Area Code 215-745-3440. Jack Baker requested that we assist them in changing from Therminol FR Fluid to Therminol 66 at both plants. He suggested contact with Ed Steinman at the Brooklyn plant to determine whether or not changes need to be made in the system for the change to Therminol 66. I don't think any changes are necessary. The systems should be drained and apparently will need flushing out with a non-chlorinated solvent prior to adding the Therminol 66. As you know, the used fluid should be returned to our Krummrich plant at the customer's expense where it can be disposed of at 3% per pound cost. In this case we will allow 30¢ per gallon credit on the amount of fluid returned.

At Continental Bakery the contact is Mr. Harold Hill at Area Code 914-967-4747. The home office for Continental Bakeries is in Rye, New York. Continental has plants in Detroit, Milwaukee, Sacramento and Charlotteville, Va. Again, it is requested we relate the fluid exchange procedure which can be carried out at Continental's four plant sites. A 30¢ per gallon credit will be granted in these cases also.

I am sure you have made these contacts by the time you receive this memo, but I wanted the memo primarily for the file and to assure that we have contacted all of these people requesting assistance in changing from FR fluid. Thanks.

Don
