SUBJECT: TLV's for Talc

TO: R. N. Miller

With reference to your request for information as to the basis for TLV of 20 mppcf for talc, I have come across the attached which is derived from a publication from the ACGIH, entitled "Documentation of the Threshold Limit Values for Substances in Workroom Air". You will see that this is based largely on the investigation carried out by Dreessen and DallaValle. We do not have a copy of this report.
