in the shop would be safe?

A I am not sure if I used the word superior. I said the administration.

Q Okay. And that that was part of the reason for the study was to make sure the men working there and the people who came in contact with that shop, in fact, would be safe in that environment?

A That was the element as to whether or not those persons had reason to be at excess risk from doing that work under a variety of circumstances.

Q And you told us that the numbers that you achieved and are reflected down here were .05 fibers to .2 fibers and also .05 to .9; is that correct?

A Those were the numbers that formed the accumulation of the various sampling, yes.

Q And I take it that, as a result of your opinions here today, you are here today to tell us that that is a safe level; is that right?

A Those levels certainly represent a concentration under those work circumstances that will not reflect the occurrence of disease or should not
