GEORGIA PACIFIC

Room 975

November 27, 1972

Georgia Pacific Corporation
900 S.W. 5th Avenue
Portland, Oregon 97204

Attention: Vince J. Trotter, Jr.

Dear Sirs:

A visit was made to your facility in Akron by Geraldine Kotas and Allen Standard on November 6, 1972. At that time the reference to the use of asbestos in your products (provided to us in a flow chart from you, dated 1/19/70) was discussed. Mr. Rausch indicated that asbestos is, in fact included in several of your products.

You are undoubtably aware of our special concern regarding airborne asbestos. Because of its hazardous nature, we do require more information on the amount that is exhausted by any of your process equipment. It is our understanding that the formulations are proprietary, therefore, we aks that you indicate the emission rate potential and the actual omissions of the asbestos for those processes and/or stacks where that contaminant is involved. The time that the process operates should also be included. We are enclosing some AIR 302.1 forms for your convenience in supplying the required data. Also, please include your total usage of asbestos on a annual basis.

If you need further clarification on any of these points, do not hesitate to call Mrs. Kotas, at 716-846-8555. We appreciate the cooperation we have had from your firm and are anxious to help you in any way, possible.
