outfit in St. Louis, Missouri to do the reclaiming as opposed to Monsanto itself performing such functions?

A Yes.

Q Do I understand you to say at that point in time there was a marketing brochure or description to customers as to how to reclaim fluids themselves? Is that right?

A I believe in the F-9 brochure at the time, and I again single out that brochure because it stands out, there was a diagram in there showing pumps, valves and various containers for reclaiming fluid and explaining how to do it.

Q Would it be fair to say that as of this point in time, any of the instructions that went out in writing from Monsanto to its customers regarding this subject matter of reclamation of, say, Pydraul were geared toward reuse for economic reasons of the used Pydraul as opposed to warnings of any possible environmental damage that could occur?

A The intent was not to see fluid get into the environment, okay, so the recommendations for reclamation were both to keep it out of the environment and for economic reasons, to reuse the fluid.

Q Was it Monsanto's view as of the mid-1960s that
