And in 1994 they finally finished their study and they published that. And that is the fourth study that I have included. And they have concluded, based on a formal case control study, that there is no increased risk of mesothelioma in garage mechanics.

That is a typical story. You start with case reports and then you do formal studies and you reach a conclusion based on studies.

Q Doctor, don't the very same authors that you just talked about, Woiderwitz and Rodelsperger, say, if there is a mesothelioma risk for car mechanics and it is small, that they could not detect it in their study?

A I look at this very gracious admission that there is no increase of mesothelioma in mechanics, because they have said before in writing that they strongly believe that there was an increase in 1991 and in 1992, and now they finish a study which they did not find an increase.

Let the numbers speak for themselves.

Q What they conclude in their own study, sir,
