

FILE NAME: Saranac 7th Symposium (SSY)

DATE: 1948 Oct 28

DOC#: SSY056

DOCUMENT DESCRIPTION: Minutes of Advisory Committee Meeting

Stone Crushing
Meeting Advisory Committee -42-

10/28/48

MR. KEOGH: After this original committee adjourned there was quite a deluge into the department. We don't specify that size. Ted Hatch was of the opinion the method of sampling eliminated the large particles. There was no necessity of putting in here the method of dust count.

DR. VORWALD: Of course you should consider a number of things. Dr. McConnell, reviewing all your evidence now and we have found a number of cases, examples of cases, where particles 320 to 3 were found. However we are not so much worried about those large particles but apparently nothing injurious as I think we are not in the position, well from ten down to five, any particles less than five.

MR. KEOGH: How do you feel toward that Dr. McConnell?

DR. McCONNELL: I have no objection because the number is so few.

DR. VORWALD: There has been a definite curve. Is there a reference to the size in the code?

MR. KEOGH: This was added Dr. Vorwald after the advisory committee--82 was added.

DR. VORWALD: I see.

MR. KEOGH: I think this medical subcommittee should give thought to incorporating 82 as part of the overall rule because as I said earlier this morning 82 is not a rule. It is just a note that has been attached on.

MR. HACKETT: Also as inhibitors.

MR. KEOGH: Well, that dates back to work in aluminum dust in Canada.

DR. McCONNELL: Well, I think Dr. Gardener felt at one time coal dust also inhibitors as well.

(Discussion off the Record)

MR. STERN: Mr. Chairman, I would like to just call attention to the fact, as you know the Department is operated under a certain set-up. Instructions from the Commissioner, interpretations specified by this Commissioner and should there be a new Commissioner we might change the rulings, so if you bear that in mind although we were bound to the instructions by the Commissioner, another Commissioner might give you other instructions.
