Safety Director

RE: Poly-Chlorinated Biphenols (PCB)

Dear Dr. Craddock,

My colleagues and I attended the recent PCIC/IAS Technical Conference in St. Louis and listened to your lunch-time address with great interest.

As electrical engineers in a large company we are often called upon for advice as to whether liquid-filled equipment should be replaced by oil-filled components or at what risk(?) should the items, such as transformers, capacitors etc be retained in service.

It would be sincerely appreciated if we could have a copy of your speech, or if such is not available, perhaps you would be kind enough to send us a list of significant references.

Yours truly,

B. A. Birkett, P. Eng.
Electrical Engineering Specialist
