SUBJECT: RM 265A - Asbestos

Per P. A. Partington's instructions, please insure that at least until May 1, 1974 you have enough RM 265A released to maintain a minimum inventory of one (1) months supply. I realize that this does not mean that you will have the inventory, but at least we will have it requested.

January 22, 1974

Following our commercial development meeting held in H. D. Shephard's office, the priorities were established in order to introduce non-asbestos recipes into our regular production.

In that respect, we want to schedule the EP-5484 recipe (a non-asbestos non-paper Proflex recipe), which has already been tested in the Chicago Plant with acceptable results, on the Mark III for an Inland Steel board. We intend to run ONLY two batches.

Also, we intend to schedule a 3 - 4 batch run on the Mark IV machine with whatever tool is on it Sunday, January 27, 1974, at 10:00 a.m. The recipe number and batch size will be communicated to you on time.

Please let us know the scheduled run at least 48 hours before.
