Subject: Consent Order Requirements - Particle Size Distribution

Rob,

Here is a spreadsheet with the particle size distribution, particle density and particulate scavenging coefficients based on the defaults in the ISC Users guide. I have left a blank slot for the vapor scavenging coefficients for when Steve and company finish calculating them. Maybe this spreadsheet could be used as a summary sheet, and then the vapor scav coefficients calculations, and the rationale for using the defaults for the particle scav coefficients could be attached.

C8 Particle Size Distribution.

I haven't added any titles, or headers/footers to the spreadsheet. I will leave that up to you, since you will probably want to have everything we submit in some sort of consistent format.

Debbie
