cc: Messrs. Gerber
Weaver

Mr. Dinsmoor

February 14, 1940

There are two items concerning Anniston's production of Aroclors that I need to take up with you again. We hope to be in the production of 2565 the first of March and with the still installation complete, about the middle of March, we will start production of 4465.

Some weeks ago our Chief Chemist, Mr. Gerber, wrote Mr. Weigand requesting certain standards to use in testing these Aroclors at Anniston. These items are as follows:

(1). Softening Point Standards for:

(a). 2565
(b). Regular 4065
(c). Regular 4465
(d). Halowax 4065
(e). Halowax 4465

(2). Seed crystals for running crystallization tests.

Will you please check on this matter and let us have the standards as soon as possible.
