UNITED STATES DEPARTMENT OF AGRICULTURE
ANIMAL AND PLANT HEALTH INSPECTION SERVICE
MEAT AND POULTRY INSPECTION PROGRAM, SE
1718 PEACHTREE STREET, N.W. ROOM 216
ATLANTA, GEORGIA 30309

October 19, 1976

Mr. W. S. Henley
Route 2
Decherd, TN 37324

Dear Mr. Henley:

Laboratory analysis of a sample collected from your cow slaughtered at Tennessee Dressed Beef Company, Nashville, Tennessee, on September 21, 1976, revealed 6.77 parts per million of the industrial chemical Polychlorinated Biphenyl (PCB) in the fat. The guideline tolerance for PCB is 5.00 ppm.

In order to make future shipments of cows from the affected premise eligible for slaughter, it will be necessary to analyze fat tissue from five (5) animals for PCB.

Samples must be analyzed by a recognized private or state laboratory with check samples submitted to a USDA laboratory. A list of such labs is attached for your information.

We attempted to contact you by telephone while this letter was being prepared. If our efforts were successful, you are already aware of our residue follow-up requirements.

Sampling instructions are being forwarded to the inspector-in-charge from this office so it is important that the cows be identified to him. A copy of these sampling instructions is attached.

If you have any questions, please contact Dr. George Martin, our Area Supervisor in Brentwood, Tennessee (615)749-5994; or you may contact this office (404)526-3911.

Sincerely,

George Harner, DVM
Regional Director

U.S. DEPARTMENT OF AGRICULTURE

Memorandum

ANIMAL AND PLANT HEALTH INSPECTION SERVICE
Meat and Poultry Inspection Program, SE
1718 Peachtree Street, N.W., Room 216
Atlanta, GA 30309

SUBJECT: Residue Violation Requiring Action, Case No. 4-025-76
Form No. 133833

DATE: October 19, 1976

TO USDA Inspector-In-Charge
Tennessee Dressed Beef Company
P. O. Box 1031
Nashville, TN 37202

Attached is your copy of the notification to the producer from which the residue findings originated. The following action is indicated:

1. This premise must pretest prior to slaughtering more cows or we can permit slaughter under retention and collect samples for analyses. It is recommended that a recognized private laboratory do the analyses with check samples sent to the MPI laboratory.

2. Collect the fat tissue from five (5) animals. Retain all animals presented for slaughter including those sampled. All those not sampled can be retained in the antemortem pens or slaughtered under retention.

3. Retain any available product from this case based on the attached findings.

4. Place this identification in Block 9 on Form MP-23, REP Resample 4-025-76.

5. Forward samples to the MPI laboratory listed in the current bulletin "Submission of Samples for Biological Residue Analysis", 76-106, dated 6-25-76.

6. Notify plant management of case follow-up actions immediately upon receipt of this information.

George Harner
Regional Director
