Re: Kelly to GLJ - 7-2-68

GLJ to Kimberly Clark 8-22-68

Ken, I passed on to Kimberly Clark Dr. Kelly's concern about adequate ventilation for a system utilizing Aroclor 1254 at elevated temperatures. Kimberly Clark is very interested in 1254 and in response to my 8-22 letter, now needs some specific information about what we mean by:

1. Elevated temperatures

2. Sufficient ventilation

They would like to know whether their present system is adequate. How many cubic feet of air need be removed for their system to be safe? What is the maximum safe handling temperature? Can we tell them by examining their facilities whether ~~xxf~~ it is safe to use Aroclors?

What can I tell them? They will greatly appreciate any assistance we can give.

GLJ:ma
