Bill Papageorge

Elmer P. Wheeler

Recently we have received inquiries relative to PCB residues in muscle tissue, fat and eggs of poultry. These inquiries have been discussed in detail with Bill Papageorge.

I have also recently received information from A. E. Staley Manufacturing Co. pertinent to the use of combinations of lipotropic agents which are reported to be effective in aiding in the excretion of PCB compounds.

In conversation with Bill Papageorge, he suggested that we forward to you for your consideration and comments the attached data which were received from A. E. Staley Manufacturing Co.

If you have any comments or questions relative to the enclosed, I would be happy to hear from you.
