J. R. Savage - JSAVA

TO : J. C. Landwehr - ANNISTON

We receive reports from our European representatives that Aroclor/water streams need to be controlled and the Aroclor separated from water. Enclosed is a copy of C. Coleman's report.

Could we put a report or a letter together indicating that this problem could be solved and giving examples of how it might be done. I'm sure we don't want a guaranteed package approach, but we could share the Anniston pilot experience with them.

We forwarded the decanter/overflow information to G.E. with disclaimers on the construction and engineering drawings which you had sent to me.

Thanks.

WR.
