Dedicated To An Informed Membership

NUMBER 144 SEPTEMBER, 1972

'WIN
WITH
RSES'

The theme of the Society's 35th Annual Educational Conference in San Diego is no idle phrase....A few of the many examples of this truism are illustrated in this bulletin. Your membership however, makes you a winner in more ways than can be covered in any issue of 'Membership - Direct Line.'

ECOLOGY AND RUN CAPACITORS

The common run capacitor, many thousands of which have been tossed into the rubbish pile when defective, has now joined the long list of polluters, according to authorities in the ecology field.

Because of its reliability, a chemical called 'Askarel' has long replaced mineral oil in the manufacture of so-called oil filled paper or film capacitors. Tests now indicate that Askarel, manufactured under various trade names, contains polychlorinated biphenyls, or PCB's in abbreviation. PCB's do not burn, they vaporize and are released into the atmosphere, water and earth, with toxic results.

RSES members are urged not to incinerate defective running capacitors and pending further coverage regarding their disposal, to simply store them on their premises. Let's not knowingly contribute to further pollution of our environment.
