This is
Exhibit No. 37
on the examination of
February 13, 1968
G.J. STOPPS in
DEC 6 1967
[illegible]NBERGER
Special Examiner
TORONTO

TO: G. J. STOPPS
HASKELL LAB

FROM: R. B. HAYDEN

THRESHOLD LIMIT VALUES
Ref: Memo Stopps to D'Alonzo, et al, 12/14/67.

Copies of the reference memo were directed to the Asst. Plant Managers at each of the Textile Fibers plants and their comments solicited. Replies have been received from all but one location. Their comments, if significant, will be forwarded to you.

The Textile Fibers plants are in general agreement with the proposed revisions for 1968 on Asbestos, Benzene, and Heptane where these materials are used. A separate study is being made of the adverse effects of Asbestos dust. Separate instructions will be issued to the plants when this study is completed.

None of the plants had comments concerning the "Additions under Consideration".

Several of the locations use hexafluoroisopropanol and are interested in a TLV to guide them in their use of this material. None of them, however, have pertinent data to substantiate or refute recommendations published by Haskell in their lab reports Nos. 2-65 and 60-66.

One of our plants (Camden) is interested in TLV's for 2-methyl-5-vinyl pyridine and tris (2,3-dibromopropyl) phosphate. Any assistance that you can give us on these materials would be appreciated.

If we can be of any further assistance, please advise.
