

Why this turbine has

NO
NO
NO

The turbine shown is lubricated with *Texaco Regal (R&O)*. This is the oil that tests prove has more than ten times the oxidation-resistance of ordinary turbine oils, and far superior rust- and foam-inhibiting ability.

Because *Texaco Regal Oil (R&O)* does such a fine job of keeping turbine systems clean, you can count on keeping bearing temperatures normal and governor response instantaneous. You can also count on extra-long service from the oil itself.

There is a complete line of *Texaco Regal Oils (R&O)* . . . for every type and size of turbine, every operating condition. They meet the stringent requirements of all leading turbine builders.

Let a *Texaco* Lubrication Engineer show you the benefits of using *Texaco* Lubricants throughout your plant. Just call the nearest of the more than 2,000 *Texaco* Distributing Plants in the 48 States, or write:

The *Texaco* Company, 135 East 42nd Street, New York 17, N. Y.
