FRICTION MATERIALS RESEARCH

August 10, 1978

TO: Mr. D. P. Conlon

SUBJECT: Dow Corning "Lubolid"

Thanks for your recent letter and the AD&D article on the subject product.

We have been aware of this material for some time and have samples for evaluation in the Volkswagen pad development project. The chemistry of this product is partially known to us, and some intelligence has been gathered regarding its application by our competitors in Europe. In addition, Bob Shaw has been advised and is studying its potential aircraft brake applications.

We're always most interested in anything of this nature that might help keep us one jump ahead.
