B 7009 - Monsanto
30-Day Tissue Residue Study

Tissues from rats employed in the following groups will be sent to Monsanto during the week of March 10, 1969:

1. Control
2. Aroclor 1242 - 300 and 1000 ppm
3. Aroclor 1254 - 300 and 1000 ppm
4. Aroclor 1260 - 300 and 1000 ppm
5. Technical DDT - 50 and 300 ppm
6. Halowax 1014 - 300 ppm
7. Halowax 1099 - 300 and 1000 ppm

Tissues from Toxaphene (50 and 300 ppm) animals will be shipped during the week of March 17, 1969.

Tissues from Aroclor 5460 (300 and 1000 ppm) and Halowax 1014 (100 ppm) rats will be sent during the week of March 31, 1969. This 100 ppm level of Halowax 1014 replaced the 1000 ppm level originally scheduled.

Therefore, the close-out date on B7009 should be changed from March 10, 1969 to April 2, 1969.
