Subject: RE: Documentary - French TV - urgent

Julie, for attribution to EPA or to “an EPA spokesperson,” please:

- A. No tolerance (maximum legal residue level) has been established for glyphosate in dairy milk in the United States. There is a tolerance of 20 ppm for glyphosate in soybean seed, which would also apply to soymilk. Under the Federal Food, Drug and Cosmetic Act, EPA establishes tolerances for commodities when residues can be expected as a result of legal pesticide use.

For all U.S. glyphosate tolerances please see https://www.ecfr.gov/cgi-bin/retrieveECFR?gp=1&SID=bd5b01521a6bd6ba075aa5494854c72a&ty=HTML&h=L&mc=true&r=SECTION&n=se40.26.180_1364.

More information on EPA tolerances can be found at <https://www.epa.gov/pesticide-tolerances/about-pesticide-tolerances>.

Bon travail, R.

Subject: Documentary - French TV - urgent

Hi,

My name is Julie Lotz. I am a French journalist and I work for French main TV channel France 5.

For a documentary I am about to finish on soy, I urgently need this information : in the US, do you have a limite of glyphosate residus in milk ? If yes, what is it ?

I need this information today as soon as possible.

Thank you very much,

Best regards,

Julie Lotz - Journaliste Réalisatrice
