ATTN: Mr. T. P. Dooley - Senior Buyer

SUBJECT: Non-Asbestos Gasketing Material

Dear Mr. Dooley:

This is another follow-up to my letter of July 28, concerning NAVSEA approval of our 2160 material under MIL-G-24696.

This week, I had an opportunity to sit down with members of NAVSEA to go over not only the sheet packing materials, but many of the other non-asbestos products that we're trying to qualify and apparently in regards to the sheet material certain information has been developed through their tests, but this information has not been disseminated at this time.

Apparently it will not be done, at least under present thinking, until the first quarter of 1989.

We're going to keep after this though as we are very anxious to have this material approved, and as far as I can determine, our 2160 has passed all the requirements.

While you haven't asked, I'm also after Underwriters Laboratory for testing of this material, but as yet they have no specification for testing the non-asbestos gasketing material.

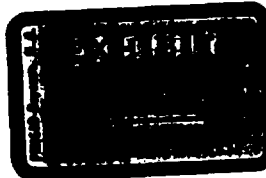

As further information is received Mr. Dooley, I will make sure that it is sent to you.

Sincerely,
JOHN CRANE INC.

Gentlemen:

I am writing again requesting the latest information on gasketing for MIL-G-24696.

We realize the materials you have submitted for QPL approval may not have been accepted as yet. However, we would like to have sufficient information of these items so that we can propose their use and possibly get approval on a per case basis.

Please forward as soon as possible to my attention.

Very truly yours,

T. P. Dooley
Senior Buyer
