RE: INDUSTRIAL HYGIENE

Relative to our conversation of yesterday, I am enclosing some information on the qualifications and duties of an industrial hygienist. As stated to you, I feel that it is particularly important that the person heading up Point Comfort's industrial hygiene activity should have a degree in the sciences or engineering (chemistry is one of the better backgrounds for this type of work). At locations where the problems are fewer, we might be satisfied with less. However, with the variety and complexity of the Pt. Comfort Operations, you will need a technically strong man.

Degrees in industrial hygiene are granted only at the graduate level. Professionals without such degrees have normally obtained the requisite additional training from short courses or on-the-job training under the supervision of industrial hygienists. Hygienists fresh out of school with a Masters Degree generally receive salaries of $12 - 14,000. A few years experience will bring them an additional $2,000. Those who are certified (which we do not see as a requisite for Pt. Comfort), do much better.

Hope the above gives you a better handle on the types of person you will want for industrial hygiene work. If there is any other information I can supply, please let me know.
