FDA STATUS 8700A WHITE 1330 AND WHITE 1360

The butyl tin stabilizers are not cleared for use in food contact articles. In addition, I have been unable to locate a clearance for violet carbazole #55.

Consequently, neither Canadian 8700A White 1330 or ⁷8400A White 1360 is acceptable for use in food contact applications under any FDA regulation.

I am sorry for the delay. I was not aware that the recipes were sent. We have no one at this location to monitor the telecopier and deliver messages.
