From **MONSANTO CHEMICAL COMPANY** cc

Anniston, Alabama

Date December 4, 1952

To Mr. John B. Trotter Reference

At St. Louis Subject

Our only information concerning the type of lacquer lining proposed for use in shipping Aroclor 1254 is "Nesco #3 lacquer."

This type of interior is applied by the National Enameling and Stamping Company, of Granite City, Illinois; according to our information, they have used this for solid Aroclors but never for shipments of liquid Aroclors.

As you also know, two drums are being furnished by the National Enameling and Stamping Company, and upon receipt of these containers, we will test them at Anniston for possible use in shipments of Aroclor 1254.
