July 18, 1958

Mr. Fred M. Younger
Younger Laboratories
5620 Telegraph Road
St. Louis 23, Missouri

Dear Fred:

We are leaving under separate cover a sample of Pydraul 625 for toxicity study.

Please run vapor inhalation tests with rats on this compound, heating the fluid up to 2000°F.

For your confidential information, Pydraul 625 is the same material as OS-83. You will recall that you tested OS-83 under Project No. Y-57-1 and found the vapors at room temperature to be only mildly irritating to rats.

This will be Project No. Y-58-31.

Very truly yours,

R. Emmet Kelly, M.D.
Medical Director
