

1 occurring at very low speeds. I think he said walking
2 speed or four miles per hour.

3 These specs are forsterite.

4 One of the plaintiffs' own experts, though,
5 talked about forsterite a little bit. He didn't talk
6 about it very much during his direct examination when
7 he was being questioned by Mr. Shellenberger.

8 He talked about it during the cross-
9 examination, and that is Dr. John Dement. And Dr.
10 Dement really only testified about this after I showed
11 him his own study that he did in 1972 which raises a
12 very interesting point.

13 The plaintiffs called Dr. Dement, and he was
14 one of their key witnesses to testify about this
15 subject and yet they really didn't talk to him about
16 his own study.

17 Instead, they had him talk about a couple of
18 studies that he didn't even do anything on. That is
19 why you see this sticker down here, Defendant's
20 Exhibit Ford 12. I talked to him about this study,
21 and I put this study into evidence.
