Dear Bill:

You may recall that we discussed SRI's interest in the Aroclor matter during the March meeting of the Society of Toxicology in Washington. You may also know that the Patuxent Laboratory of the Bureau of Sports Fisheries and Wildlife already have studies underway of the Aroclors with Japanese quail and, I believe, other birds. How far they plan to pursue these investigations, I do not know, but the subject apparently is of sufficient concern that they have not only biology type staff looking into the problem, but also are engaged in a broad, collaborative analytical investigations. You are undoubtedly familiar with all these matters.

Sincerely yours,

Gordon W. Newell, Chairman
Department of Agricultural and
Environmental Toxicology
