Memorandum on Plant of

The Garlock Packing Company

Supplementing The

General Report

"Preliminary Dust Investigation For Astoria Textile Institute"

Of June, 1947

Dustiness

This plant is designated as G in the general report and an appraisal of its dustiness is summarized in that column of Table 1, page 5.

The differences between these values and those of other good plants are, on the whole, not significant and we rate this plant as average "good." However, this does not mean that dust control is entirely satisfactory in all respects as indicated in the general report.

There is an insufficient number of dust counts in the company files to constitute an adequate record of dustiness. Normal variations require a number of counts at each operation to provide a useful average.
