Ref: Asbestos Removal

Gentlemen:

As a followup to my conversation with your office and in accordance with procedure guide lines sub-part E, on November 2, 1982, we were awarded a contract at the Ford Motor Co., Canton Forge Plant, P.O. Box 8591, Canton, Ohio 44711, Mr. Ray Denzak, Plant Engineering Dept.

The facility in question is a single story Forge Plant built prior to World War II. ~~The existing insulation for removal in question is asbestos and any other insulation not to be removed is to be removed in the same process as the asbestos.~~

We propose to remove the asbestos insulation where called for by the scope of work prepared by Ford Motor Co. Engineering Dept. Total footage approximately 2800 sq.ft.

Workmen in protective clothing and respirators will remove the insulation by the wet method with wetting agent added. After the insulation is wet down, workmen will place the insulation into double 6 mil plastic bags and fiber barrels completely sealed and labeled for proper handling. ~~NOTE: At no time will we drop the asbestos insulation to floor level, but will remove the insulation at line height.~~

Ford Motor employees will not be permitted to be in the general area of removal. We have a contractual agreement between Clark Industrial Insulation Co. and Ford Motor Co. to eliminate parties not involved in the removal from the area.

We will do so by removing the insulation during shut-down and on overtime if required.

Barrels of asbestos will be stored in a 40 foot trailer and locked for proper disposal at the approved Ohio E.P.A. dumping site.

Complete adherence will be followed in accordance with the standards set forth under the Clean Air Act 40 CFR, Part 61, Subpart B.

Shower facilities will be provided for the workmen throughout the entire length of the contract between the parties.

Hoping this letter meets with your approval. Should you have any questions regarding this letter, please do not hesitate to contact me.

Sincerely,

CLARK INDUSTRIAL INSULATION CO.
