NEW YORK November 2, 1936

Dr. W. F. Machle
University of Cincinnati
Eden and Bethesda Avenues
Cincinnati, Ohio

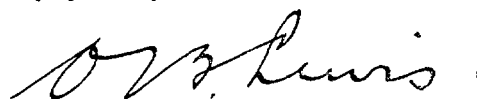

Dear Dr. Machle:

This will acknowledge your letter of October 23th.

You might be interested to know that John Schaefer and I took some samples from the low pressure side of the eductor (out of a tee on the line running to the gauge) at one of our plants in Wilmington. I have just received a letter from John in which he states that the present tetraethyl lead by gravimetric analysis ran as high as 25% (39% fluid). The results were not uniform and we have not been able to support them by theory.

I plan to go over the results with John and it is quite likely we will take additional samples.

Very truly yours,

W:GCL
