Mr. C. Aird Moffat
Industrial Plastics Corp.
Elkhart, Indiana

Dear Mr. Moffat:

Your letter of October 19th to Mr. R. A. Richards of the Detroit office of our Bakelite Company, has been referred to us.

On the basis of such information as we have on the physiological effects of the components of VG-1916, and from the experience available in its use in the manufacture of intravenous tubing, we believe it to be quite suitable for such use. We have sold many thousands of pounds of this compound for intravenous tubing. Prior to this, the F&DA had advised that it would have no objection to the use of such a vinyl resin formulation in the manufacture of tubing for administering intravenous fluids and blood because of the insolubility of the components in physiological fluids.

Very truly yours,

INDUSTRIAL MEDICAL & TOXICOLOGY DEPT.

Thos. W. Hale, M. D.

To: Dr. T. W. Hale
From: H. S. Robertson

Date: Oct 29/57
Subject:

Would you please write Industrial Plastics
(with copies to P. J. Rizzo, Nyo & R. A. Richards -
Bakelite - Detroit) + indicate VG 1916 is OK for
intended use. We have sold many thousands
of pounds of this compd for interavenous tubing.
Lehman has no objection to DOP in this use.

Dear Mr. Richards:

VG
In connection with the -1916 compound that you sent us,
can you assure us that it is satisfactory to transmit
blood plasma or other materials for intravenous feeding
and that it will be non toxic for these applications.

You told us there was no lead in the compound and our
customer would like our assurance that it is suitable for
these purposes.

Yours very truly,

INDUSTRIAL PLASTICS CORP.
