ASBESTOS PROCEDURES

RE: Letter, H. A. Smith to Plant Environmental Coordinators,
Asbestos Regulations, 10/2/78

The procedures and practices for Beaumont Works were reviewed carefully for compliance.

- All employees receive necessary x-rays annually. All mechanics on Works Engineering employees have potential for contact.
- Necessary and approved respiratory protection is stocked in Stores for use in any field operation. Controlled by Safety Supervisors.
- Procedures for disposal complete and controlled as to proper handling with approved disposal site (EPA). All shipment papers handled properly.
- Semi-annual monitoring for asbestos during handling is conducted.
- Plans for handling of asbestos are clearly stated and readily contained. Notes are available for all employees for handling this class of material.
- The plan for handling of EPA of asbestos during its date. We will draw on the best practices in near future of regulated amounts.

I believe the compliance of the laws and rules for asbestos is in compliance with the regulations governing asbestos handling and disposal. I am sure that the Beaumont Works is in compliance with the regulations.
