

June 12, 1953

Dr. R. W. Schiessler
Associate Professor of Chemistry
Pennsylvania State College
State College, Pennsylvania

Dear Doctor Schiessler:

I am writing in reply to your phone call of June 8th. Dr. Horton is making a survey trip through Europe and the Scandinavian countries and is not expected back in the laboratory until the middle of August.

Of course, I do not know the purpose of your call, but if it concerned the availability of samples for use in our carcinogenicity study, I want you to know that we are still very much interested in obtaining several of those in the 12 to 25 carbon range which you could provide in the necessary amount. Dr. Ruth Pierle, a member of our API research team, has been working on the accelerating properties of various hydrocarbon solvents. She and Dr. Horton have discussed possible accelerators many times and during his absence Dr. Pierle is actively continuing these studies.

Very truly yours,

Mary Jane Graf, Secretary to
Dr. A. W. Horton
