

Multi-stage refrigerant piping (continued)
 accessory equipment (continued)
 refrigerant liquid pumps, 785
 subcoolers, 782-783
 cascade systems, 781, 782
 basic elements of, 781
 compound systems, 781, 782
 additional components, 782
 basic elements of, 782
 control, 788-789
 during pull down, 789
 liquid feed control, 788-789
 varying loads, 789
 varying temperatures, 789
 equipment considerations, 782-783
 compressors, 782
 condensers, 782-783
 evaporators, 783
 insulation, 790
 moisture in circuit, 789-790
 pipe sizing and friction data, 788
 piping, 788
 friction values, 788
 oil return arrangement, 788
 sizing, 778
 reasons for, 781-782
 refrigerants, 782, 783
 temperature limitations, 783
 types of systems, 781
 vapor barriers, 790

Multi-zone air conditioning, 9
 dual-duct systems, 9
 fan coil systems, 81
 induction unit systems, 20

O

Odor control, 799-808
 combustion methods, 806, 808
 catalyst life, 807
 complete oxidation, 806
 heat value recovery, 807
 use of catalysts, 806, 807
 masking, 804, 805
 applying compounds, 804, 805
 control by, 805
 definition, 804
 modification, 805, 806
 air conditioned spaces, 805
 applying modifiers, 805, 806
 industrial areas, 805
 removal, 799, 804
 activated charcoal, 801
 by absorption, 800
 by adsorption, 800, 801
 by ventilation, 799, 800
 carbon reactivation, 801

Owning, operating costs, 859-864
 energy costs, 862
 constant loads, 862
 electrically-operated, 862
 full-load hours, 862, 863
 heat-operated, 863
 fixed charges, 859-861
 amortization, 859
 insurance, 861
 interest, 860
 rent, 861
 taxes, 860
 labor for operation, 861
 maintenance costs, 861
 labor and material, 861
 repairs, 862
 upkeep, 861, 862

Owning, operating costs (continued)
 water costs, 863
 computation of, 863
 conservation equipment, 863
 windage losses, 864

P

Panel-air systems
 absorption from lighting, 47
 air conditioning, 45
 comfort conditions, 51
 computations, 46
 condensation control, 51
 features, 45
 luminaires, water cooled, 50
 installation cost, 52
 operation, 51
 panel cooling, 45, 47
 panel resistance, 50
 panel temperature, 49
 panel water circuit, 51
 performance, 45
 solar absorption, 48
 suspended panels, 50
 temperature control, 51
 test data, 48
 zoning, 45

Panel heating

application methods, 147
 electric panels, 149, 160, 165
 embedded piping, 147
 warm air ceiling, 148
 controls, 160
 design procedure, 152-160
 ceiling panel, 153-157, 160
 floor panels, 157, 159
 wall panels, 157
 warm water, 153
 installation, 160
 panel construction, 147-149
 panel output, 149
 combined, 151
 convection, 150
 covering effect, 151, 158
 panel loss, 152
 radiation, 149
 panel temperature, 148
 starting system, 148

Photographic material air condition-

ing, 329
 film manufacture, 329
 film storage, 333
 archival films, 333
 color film, 335
 nitrate base film, 335
 relative humidity, 334
 safety base film, 333
 temperature, 334
 processing materials, 330
 dryers, 331
 drying film, 333
 filters, 331
 general air conditioning, 330
 humidities, 331
 laboratory pressure, 361
 temperatures, 331
 temperature control, 331
 water required, 332

Piping

ammonia, 727, 765-789
 arrangements, refrigerating, 745-747

Piping (continued)

brine, 738
 building, 116
 conduits, 113
 high temperature water, 127-129, 143
 induction unit systems, 22, 25, 26, 31
 liquid line arrangements, 738
 multi-stage refrigerant, 781-790
 refrigerant, general, 727-736
 refrigerant, 12, 22, and 500, 736-764
 refrigeration, 657, 727-736
 retail store refrigeration, 635
 sizes, 89, 91, 112, 792
 skating rink, 714, 718
 snow melting, 834, 840
 snow melting correction factor, 839
 steam heating systems, 90
 suction piping, 738-742, 747
 tunnels, 115
 water, 791, 814
 water services, 809-817

Piping for refrigerant systems, 727-736

general piping practice, 734-736
 arrangement and location, 734
 code restrictions, 736
 damage protection, 734-735
 insulation, 735
 vibration and noise, 735-736
 line capacity multipliers, 732
 line velocities for various refrigerants, 734
 refrigerant flow, 733-734
 flow rates, 733-735
 line velocities, 733, 734
 sizing lines, 727-733
 discharge lines, 730
 line capacities, 728-731
 liquid lines, 727
 suction lines, 727-730
 valves and fittings, 733
 refrigerant line capacity data, 728-732

Piping for Refrigerants 12, 22, and 500

basic principles, 737
 capacity reduction problems, 737
 component piping, 749-754
 direct expansion air coils, 751-753
 direct expansion chillers, 750-751
 flooded coils, 753-754
 flooded fluid coolers, 749-750
 semi-flooded evaporators, 751
 valves, 749-750
 compressor control, 761-762
 automatic pump-down, 761-762
 flooded type evaporators, 762
 manual control, 762
 short operating cycles, 762
 single pump-out, 762
 condenser to receiver piping, 744-747
 evaporative, 745-747
 gas binding, 744
 multiple condensers, 745
 piping arrangements, 745-747
 shell-and-tube, 745
 single condenser, 745
 discharge (hot gas) lines, 742-744
 double gas risers, 743
 drainage prevention, 743-744
 gas mufflers, 744
 hot gas risers, 743
 minimum gas velocities, 743
 oil entrainment, 743
 oil separators, 743
 head pressure control, 759-760
 air-cooled condensers, 760

Index to Technical Section

Piping for refrigerants (continued)

head pressure control (continued)
 evaporative condensers, 759-760
 water bypass, 759
 water-cooled condensers, 759
 water regulating valves, 759
 hot gas bypass, 762-764
