MCS 1839

1. Approach to short-term manufacture:

   a. Process in 00 Building is O.K.

   b. Conflicts with phthallyl chloride schedule and desire for TXS rate demonstration.

   c. Plasticizers Division probably willing to relinquish control if Functional Products makes a commitment.

2. Approach to Interim Manufacture:

   a. Everett fit may be good -- CED pursuing. & / "Turke Foam

   b. 00 Building probably much too small -- and TXS competes.

   c. Toll manufacture of 1839 (or perhaps TXS) a possibility.

   d. 6-8M pounds/year desired (as blend).

3. Need on both points to have dialogue with Plasticizers and make some commitments.
