Following is a summary of results of our 1972 X-Ray interpretations.

159 Employees X-Rayed
109 with normal chests
50 showing fibrosis, emphysema or other
chest abnormalities.

One employee who showed an abnormal condition in 1971 was removed from the 1972 list as the 1972 interpretation showed a normal chest.

These were 4 employees who showed abnormalities in 1972 that did not in 1971, so were added to the abnormal list as follows.

Age 49 - 5 years employed
48 - 14 years employed
37 - 13 years employed
27 - 8 years employed.

Six people showed an increase in fibrosis since 1971.
