FURNITURE FINISHES

In order to assess the safety of the new line of furniture finishes, please submit information on total composition, residual monomers level (if available), method of application and end use (children's furniture?).

Attached is Haskell Report 170-70 on two of the A-B dispersants. As you can see, it is a mild irritant at 50% concentration. Similar studies may have already been done on the organosol resin.

As soon as I get the necessary information from you, I will review it with Haskell to determine if any testing is necessary.
