File Hazardous Products labels

M. H. Barbosa:

QUALITY CONTROL DEPT
IND INSTL. DIV.

1971

Marine Products were Shipped - these Hazard labels to Hopeman Bros. —

- Hopeman was aware of the label situation —
- When Panels were received - they ran into trouble taking them off the Marinite panels - and have claimed on a 2.4.5. report it took up to 10 minutes (8-10) to remove labels - using a putty knife - & final hand sanding - using a hot iron - which draws the contact of the label into the Marinite - therefore requested no more labeles - the 2.4.5 is still pending —
- We met - the lawyers & Lod approved the use of a red-ink-rubber stamp application of the same wordage of the label. This is currently being done on Marine Panels from Billerica —
- AVM Corp. heard of this problem & requested same treatment. - & threatened to cancel their ± 4000 sheet Marinite order -

This label is being used on Marine Panels from Nashua only. (Marine Veneer.) - applied to the back of panels —
