ENDD 864	On Injection Pump in "V"	3-5703, 3-5704, 3-5705	.5	1

NOTES:

1. Select a lower RPM Tach-Head if the engine will always be operated at lower speed.
2. Some engine models (Allis-Chalmers, International Harvester) require addition of an angle-drive (if not already installed) for mounting the Tach Generator. This can be procured from engine supplier.
3. On G.M.C. and Detroit engines equipped with an angle-drive, the angle-drive must be removed. Mount Tach Generator directly to engine.
4. Mack engines with Tach-drive located on right hand front of engine require Number 3-5731 Tach Generator Extension.
5. If addition of an engine hour meter is desired, install an electric type (except that a mechanical type may be installed on the angle-drive of Caterpillar engines, if desired.)
