PLAINTIFF'S EXHIBIT 70

638 (3)

For the past two years and particularly during the last 18 months, I have attempted to communicate to C/M management the seriousness of the asbestos health issue as it relates to C/M. I brought this meeting in June 1973 at which mortality and morbidity data was reviewed in detail would be more than sufficient to shock people into action. The point I figured eyes Nick & Marshall would get across was the lack of action since. Prior communications. - See next pg

R/M is in a unique and vulnerable position - not typical of asbestos industry as a whole. In K Porter probably most most vulnerable other more hazardous operations have been eliminated. Extraction and fiber plant shut down. Textiles operations most eliminated, via closing two textile plants shut down.

Textiles

- C/M health issue indefensible - must face it and not getting better!
- most [illegible] exposure [illegible]
