Re: [REDACTED]

Gentlemen:

On May 2, 1963, a visit was made to The Edward R. Hart Company, Canton, Ohio to check conditions under which the above named decedent had worked. This company does commercial and industrial insulation of pipes, ducts and boilers.

The decedent's employment experience with this company is as follows:

7/15/60 - 12/15/61 Insulating worker.

The decedent applied insulation on the various insulating jobs which this company contracted to do. For about 95% of his work he applied preformed 1" lengths of fiber glass insulation to pipes. He used rigid fiber glass board and blanket-type fiber glass insulation on flat surfaces. The decedent probably used a very slight amount of asbestos for some finishing work. An asbestos powder was mixed with water to form a paste or plaster used for certain finishing operations. It appears that the decedent had occasional slight exposure to some dust containing asbestos. He generally did not work with materials containing asbestos.

Very truly yours,

DONALD W. HUMSEY
Industrial Hygiene Engineer.
